Get BIG with CloudFactory

July 17, 2012 By Farhan Niazi   Leave a Comment

CloudFactory is team of 40 software developers, that are responsible for architecting, building and maintaining CloudFacroty. It offers you a force of skilled workers, who will help you get your tasks done easily and efficiently. Humans and robots are at your disposal, so one needs to identify which worker to use. The cost is completely dependent on the amount of work assigned.

Overview

It all started in Nepal (when a couple went on a vacation of 2 weeks) and later on Nepal became the hub for CloudFactory. Owned by Mark Sears (Founder & CEO), CloudFactory is team of 40 software developers, that are responsible for architecting, building and maintaining CloudFacroty.

Keeping the Henry Ford's Assembly Line Model in mind, CloudFactory enables digital work to be completed faster and to a higher quality while bringing the costs down for the clients and increasing the amount the cloud workers can earn.

Lets us take a quick look at the features offered by CloudFactory.

Features

- Offers you a force of skilled workers, who will help you get your tasks done easily and efficiently.
- The CloudFactory model will assist you in getting the most out of your workers.
- Workflow models can be made custom or already defined models can be used.
- Humans and robots are at your disposal, so one needs to identify which worker to use.
- Cost is completely dependent on the amount of work assigned.
- Robots have been designed to carry out tasks like text/term extraction, keyword matching, image processing, media conversion and much more.

Pricing

- Signup is Free.
- Small or One Off Projects cost between $15 to $130
- Large or Ongoing Projects cost between $600 to $1000
- Costs for Robots are provided separately. Click here for details.
